

REHAU

Radiant Heating Panel Systems

RAUPANEL™

Achieves 50% higher heat output among panel systems:

270° contact between pipe & highly conductive aluminum panel delivers quick response

Built-in air pocket and wide contact surface efficiently directs heat upward

Lower fluid temperature requirements

Choice of 6" or 8" on-center spacing yields precise pipe layouts

RAUBOARD™

Competes head-to-head with traditional panel systems:

5% higher heat output edges out competitive plywood panels

Choice of double groove or single groove panels simplify planning and installation

Install with typical construction jobsite tools

½" low profile panels minimize adjustments in retrofit projects

RAUPLATE™

Double-channel heat transfer plates for joist space applications save time, reduce effort and improve heat transfer efficiency.

Double plate covers more area

Reduced labor in comparison to single plate installations

Pipes snap easily and firmly into grooves without tools

Increased heat transfer efficiency to the floor above
