

LeakBreaker® Water Heater Shut-Off™

The **Taco® LeakBreaker®** helps protect homes from costly water heater leaks by automatically shutting off the incoming water supply when a failure is detected. The system includes a control unit, valve with actuator, and sensor, and can be installed on virtually any style of water heater. A multi-color

LED indicator and audible alarm provide clear status updates, while optional eLink® Wi-Fi technology sends alerts and real-time system information directly to your mobile device or desktop—so you're always informed if an issue occurs.

*Installation of the control unit, valve and sensor is a snap.
LeakBreaker is available with and without eLink capability.*
