

ADVANCED CONTROL & FLEXIBLE PUMP CONFIGURATIONS

TridentBoost™

The **Taco® TridentBoost™ booster system** features a 10" full-color HMI touchscreen with an intuitive start-up wizard that simplifies commissioning and system setup, no laptop required. The user-friendly interface provides quick access to diagnostics, alarms, and real-time performance data, making operation and troubleshooting simple.

FEATURES & BENEFITS

10" Color Touchscreen

- Large full-color HMI display for intuitive system operation
- Easily navigate menus and view real-time performance data
- Quick access to diagnostics and alarm notifications
- Eliminates the need for laptops during setup and troubleshooting

Available in End Suction or VMS Pumps

- Flexible pump options to meet varied pressure, flow, and space requirements
- End suction pumps offer easy maintenance and a compact horizontal footprint
- Vertical multi-stage pumps provide high-pressure performance and energy efficiency
- Slim vertical design ideal for space-constrained mechanical rooms

UL508A NEMA 12 Control Panel

- UL508A compliant enclosed drive and controls for safe operation
- Reduces need for external wiring and simplifies installation
- Built-in filtration system protects electrical components and extends lifespan
- Field-flexible panel stand allows rotation using predrilled mounting holes

APPLICATIONS

Ideal for commercial and mechanical room installations requiring reliable booster system performance, flexible configurations, and simplified installation.
