

tekmar®

A **WATTS** Brand

LEADING THE WAY IN HEAT PUMP CONTROL

HOUSE CONTROL 406 HEAT PUMP & BACKUP

tekmar® offers an integrated system solution for heat pump applications making the House Control 406 unique in the industry today. Why settle for anything less than an integrated system?

INTELLIGENT SWITCHOVER

- Designed to operate equipment in a 2-pipe, single tank, hydronic heating or cooling system.
- Ability to operate up to two heat pump stages (water-to-water or air-to-water).
- Optimize heat pump and backup heat source operation (boiler or electric resistance).
- Maximize operation of the heat pump by monitoring existing outdoor and indoor conditions.
- Controls on/off or modulating boiler.
- Radiant floor heating & cooling.
- Domestic hot water priority.

HEAT PUMP OPTIMIZATION

Maximizes operation of the heat pump by monitoring existing conditions. If conditions are not optimal, the control will enable the backup to satisfy the heating load.

INTEGRATION IMPROVES PERFORMANCE

Targets the lowest water temperature possible while still maintaining a comfortable temperature in the space. This is achieved through integration of outdoor reset and communicating thermostats, which provide indoor temperature feedback.
